

A Global Impact Network on a Mission to Transform Agriculture

The Sustainable Agriculture Network (SAN) is a global network of organizations working to transform agriculture into a force that heals ecosystems, strengthens communities, and builds resilient food systems.

SAN brings together a diverse alliance of 38 member organizations operating in more than 120 countries, collectively advancing sustainable practices across over 40 million hectares of agricultural landscapes.

Together, SAN members support farmers, businesses, and communities to adopt practices that protect biodiversity, address climate change, improve livelihoods, and promote equitable food systems.

What We Do

Build a Global Impact Network

SAN connects organizations across regions and sectors to share knowledge, scale solutions, and accelerate the transition to sustainable agriculture.

Advance Sustainable Farming Practices

Through training, tools, and collaborative programs, SAN members work directly with farmers and value chain partners to promote practices that restore ecosystems, strengthen resilience, and improve productivity.

Drive Systemic Change

SAN helps align agriculture with global sustainability goals by supporting initiatives that address climate change, biodiversity loss, and rural inequality.

Amplify Collective Impact

By bringing together expertise from across the network, SAN helps scale innovations and demonstrate that sustainable agriculture can deliver real environmental, social, and economic outcomes.

Our Vision

SAN envisions a future where agriculture heals and nourishes our extraordinary planet, supporting thriving ecosystems and prosperous communities.

Our Mission

SAN's mission is to transform agriculture toward a sustainable and equitable future for communities and nature.

Why SAN Matters

Agriculture sits at the center of some of the world's most urgent challenges – climate change, biodiversity loss, and food security. SAN demonstrates that solutions are possible when organizations collaborate across borders, sectors, and cultures.

By combining local expertise with global collaboration, SAN enables farmers, organizations, and partners to scale sustainable solutions that benefit people, nature, and the future of food systems.

Partner With Us

SAN works with NGOs, research institutions, companies, and donors committed to transforming agriculture at scale. Through collaboration, partners can contribute to advancing sustainable farming systems that benefit both people and the planet.
